A faint, grayscale photograph of a city skyline at night, featuring numerous skyscrapers and illuminated windows.

User guide

# What it is and How it Works

**When it launched the APR  
(ROI) for farming or staking  
started from 19,000 APR  
(ROI), depending on when  
you're reading this the APR  
keeps Changing according to  
provided Liquidity. This is  
standard procedure for every  
DECENTRALIZED  
EXCHANGE. As more people  
provide liquidity the APR will  
continue to change.**

We have also launched our Reward and Governance Token Called The ABiT Coin - TXT.

The ABiT Coin is a reward token for the ABiT Network Ecosystem, similarly to how Tatcoin is the ecosystem's utility token. As a result, the Company will not sell TXT, but will use it to reward users who meet certain conditions like staking, providing liquidity etc, on our Decentralized Exchange TATSWAP.

Basically, to earn TXT coin, you need to provide liquidity in BNB and TAT.

The total supply of the token will ever be 10,000,000 tokens. And the best part is that it is not already mined.

It's only being mined when someone Stakes or Farms TATCOIN on TATSWAP. What this means is that TATCOIN must go out of circulation for TXT to come into circulation.

For each TXT minted a big Number of TATCOIN is held away. Therefore, the supply of TXT will always be low since it doesn't just come into circulation on its own. TATCOIN must be kept away from circulation first.

So TXT will always be the reward people get in our Ecosystem going forward.

# Here is how to use tatswap

**For the purpose of this guide, we'll use the trust wallet app for our explanations.**

So, the first thing you need to do is to download the Trust wallet from the App store for your phone operating system (For Android go to Google Play Store. For iOS go to Apple Store)

Next, you need to set up an account on your trust wallet. To do this, simply follow the trust wallet prompts.

Ensure your recovery phrase is kept very secure and private.

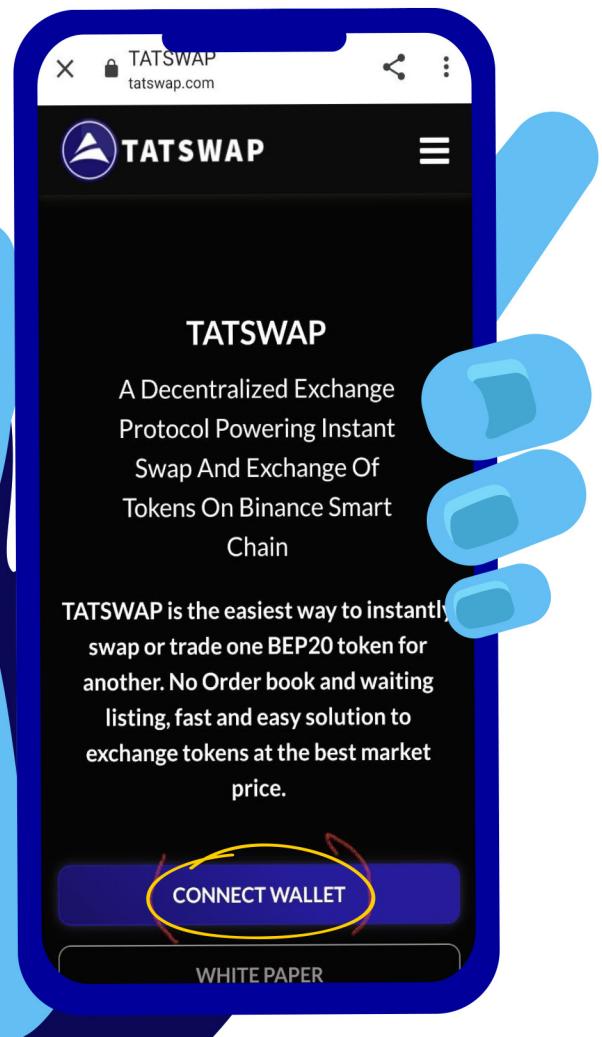

Afterwards, you need to have BNB and TATCOIN inside the respective Wallets provided for them in the trust wallet app. You can either buy, or send them from wallets where you already have them. Only BEP-20 (BSC) TATCOIN is required. If you only have ERC20 Tatcoin, you can either choose to buy BEP-20 versions or bridge your ERC-20 tokens to BEP-20 versions.

# Connecting Trustwallet to tatswap

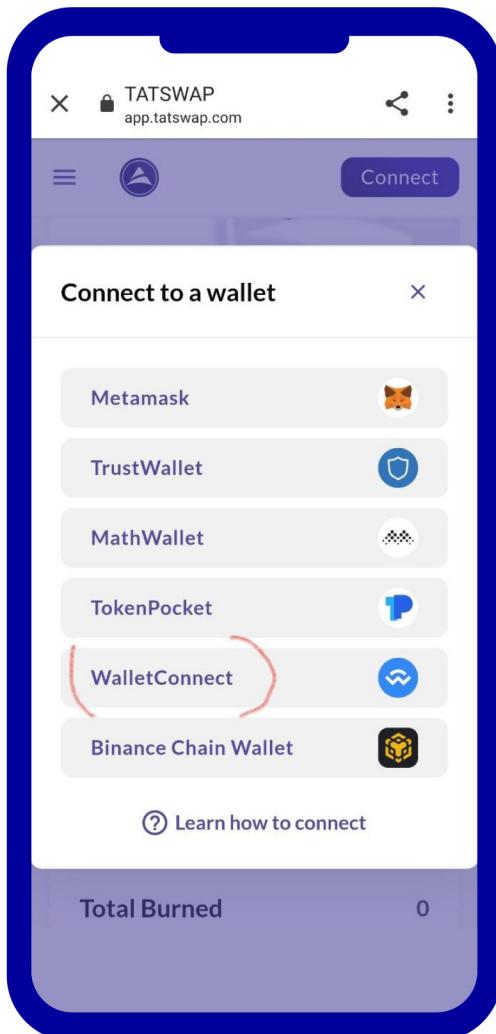

Go to Google Chrome browser or any browser of your choice. Type in the url: (tatswap.com) and wait for the website landing page to appear. This is what you will see:

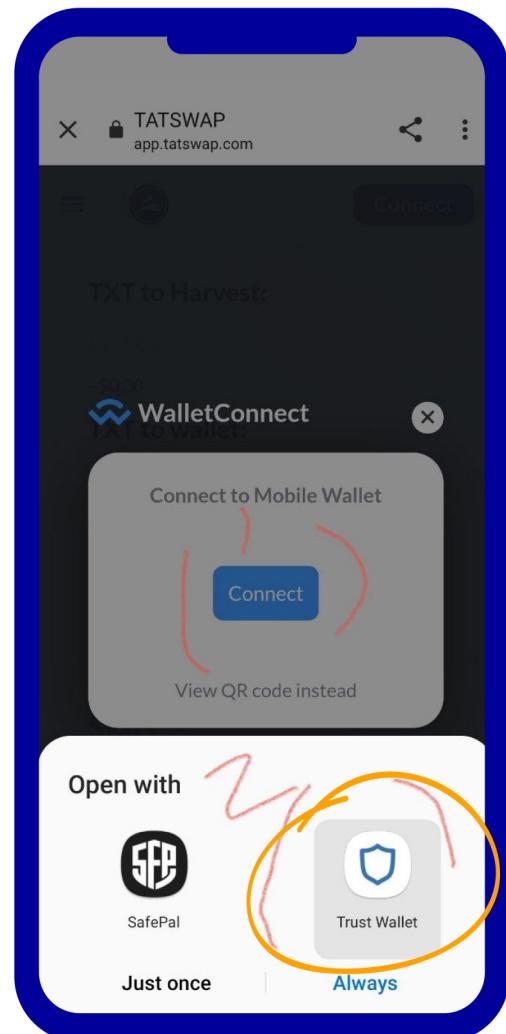

**Click on  
“Connect Wallet”**

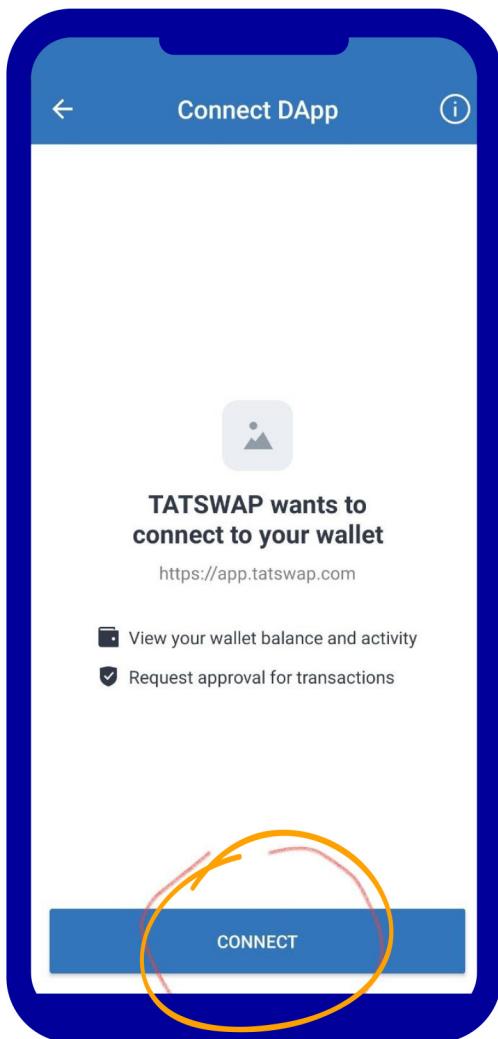

If your phone does not activate Trust wallet automatically, then click on WalletConnect from the pop up screen (shown below). It is the surest way to connect your app.

It will bring up a screen asking you to Connect (as seen in the image below, with the label number 1). Click it. It will pop up to the number 2 label.

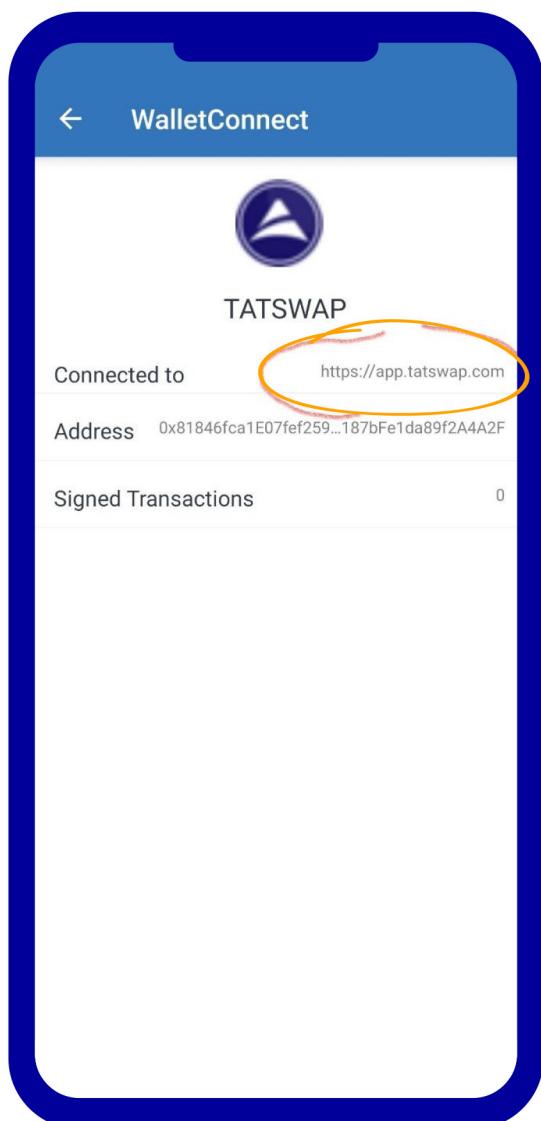

Select Trust wallet from the options given. It is where you have your TATCOIN and BNB waiting. When you do, it will Ask you for permission to access your wallet.

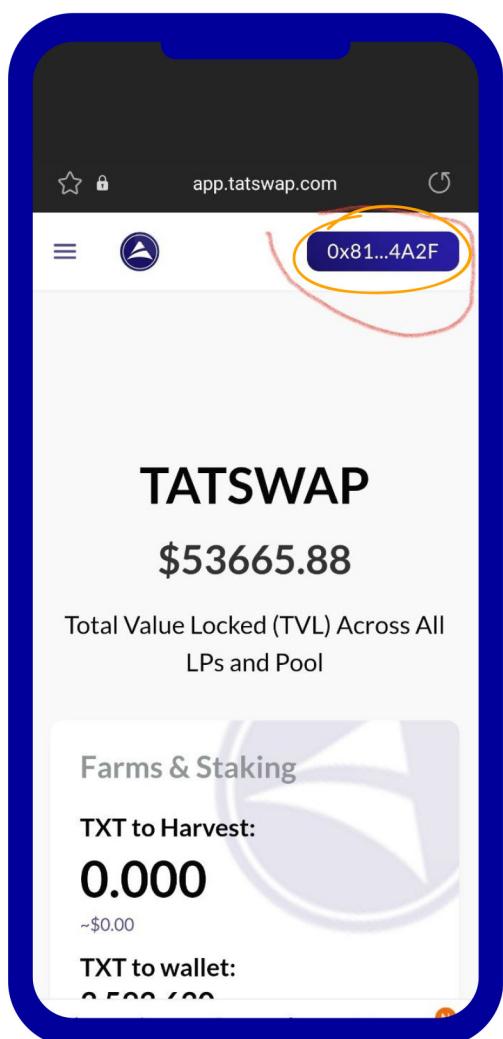

Give it go ahead by clicking on the connect tab shown in the image above.

When it connects it will show you that it's connected as shown in the image below:

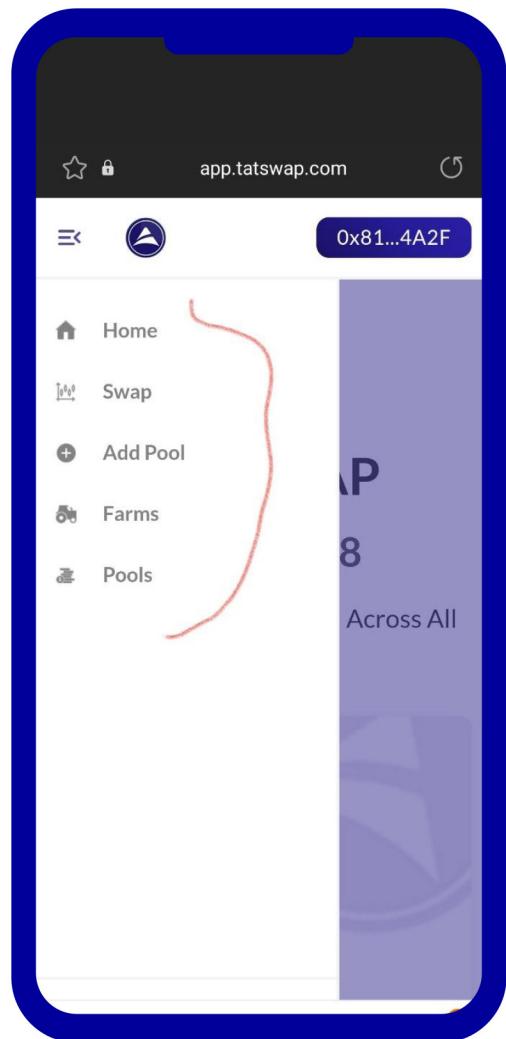

Next, minimize and go back to your Browser or wait till the page opens (as shown below) and you see your wallet showing up, at the top right corner of your open page (circled yellow below)

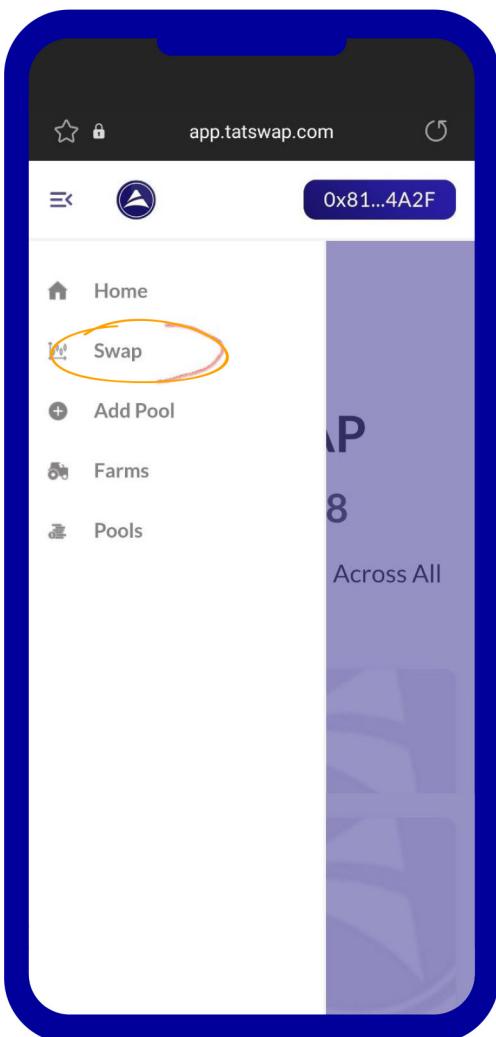

# How to Swap TAT for TXT

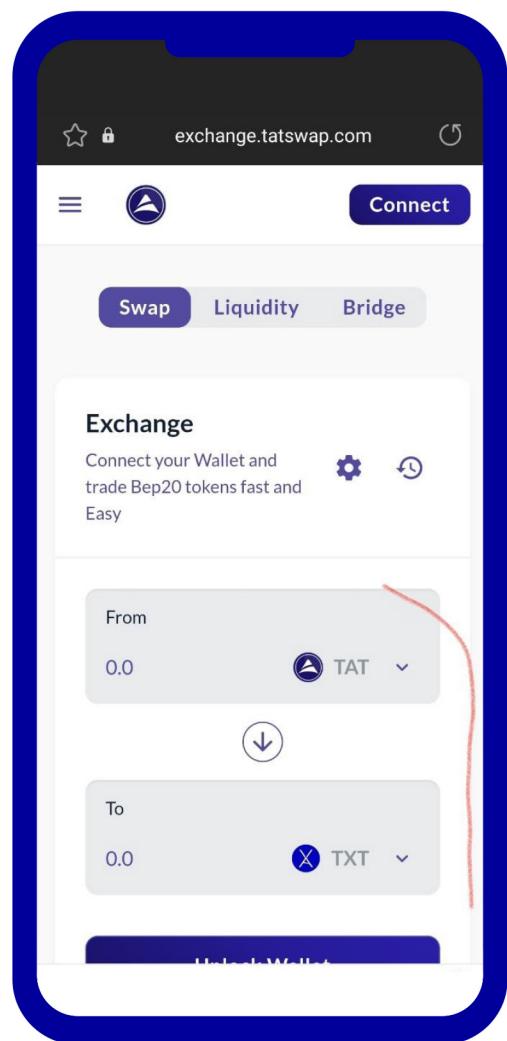

Click on the menu bar at the top left corner of the page (as shown in the image above). It will open to the image below.

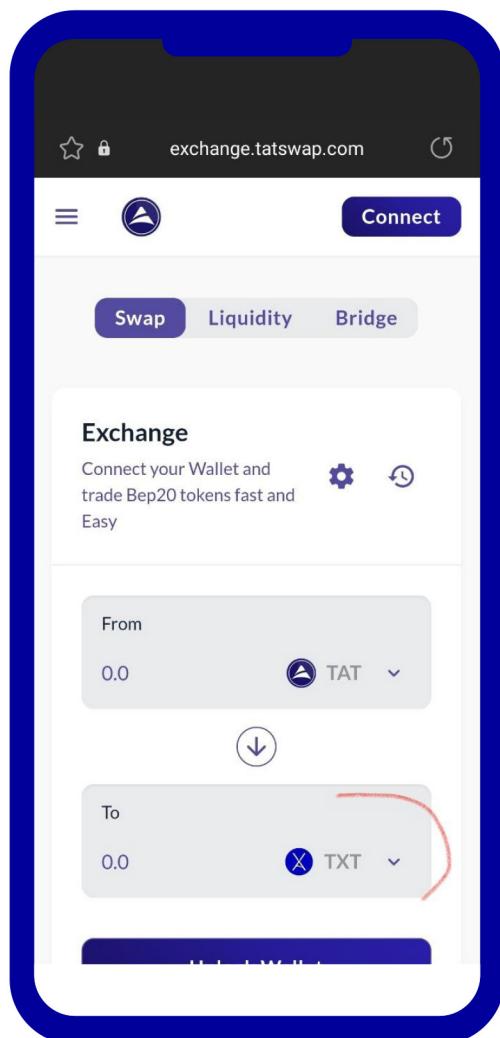

To proceed with converting your BEP-20 Tatcoin token (TAT) to the governance token, ABiT Coin (TXT), click on Swap, as marked in the next image below:

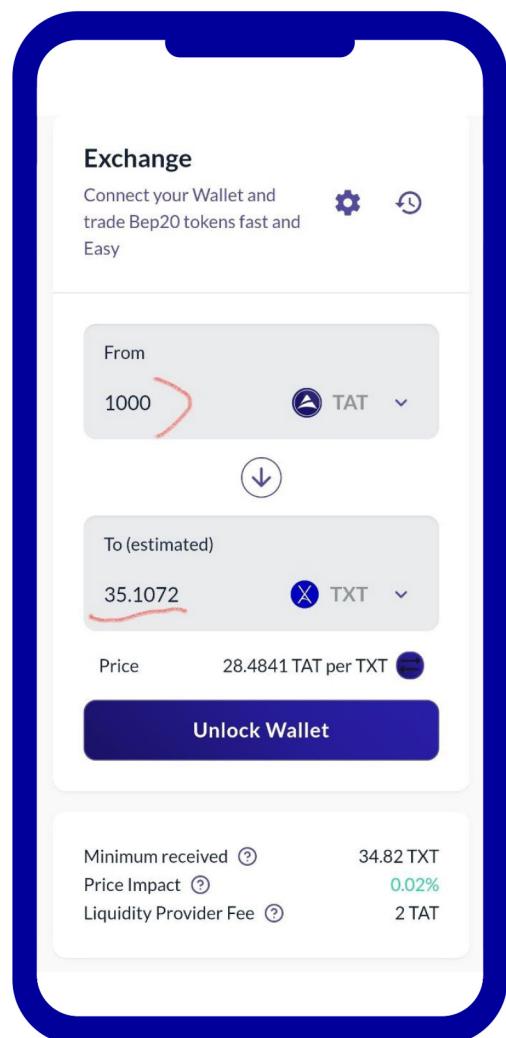

It will open to the new page below. No matter the coin showing on the place labeled TAT (in the “from” tab) as shown in the image below, simply click on it and type in TAT, then select Tatcoin (you will recognize it by its ticker symbol) in the drop down display.

Do the same thing for the “**to**” tab, but this time replacing whatever other coin is listed where TXT is in the image below (or it's empty), by typing in “TXT”. Select TXT from the drop down display, resulting to the image below (marked red).

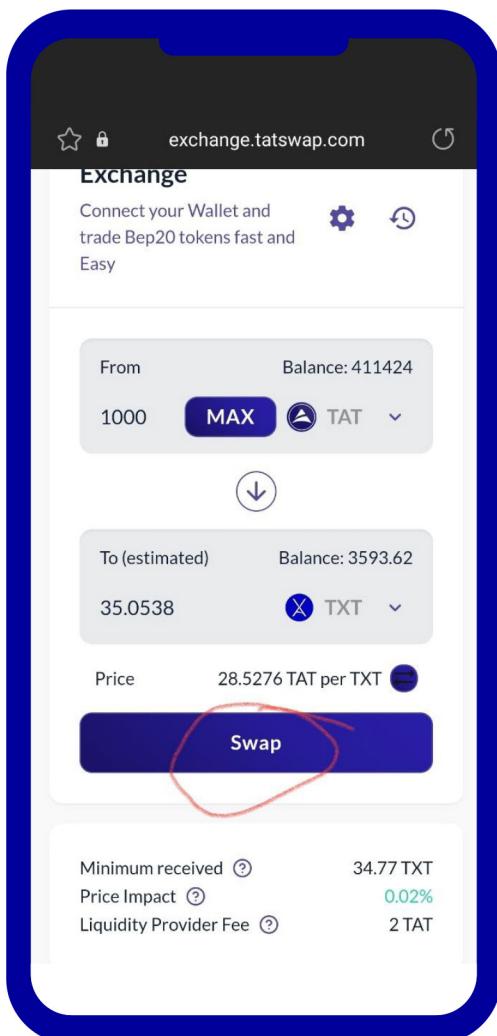

Next, input the number of TATs you want to swap to TXT as seen circled in the image below. It will automatically show you how many TXT you typed-in TAT will give you.

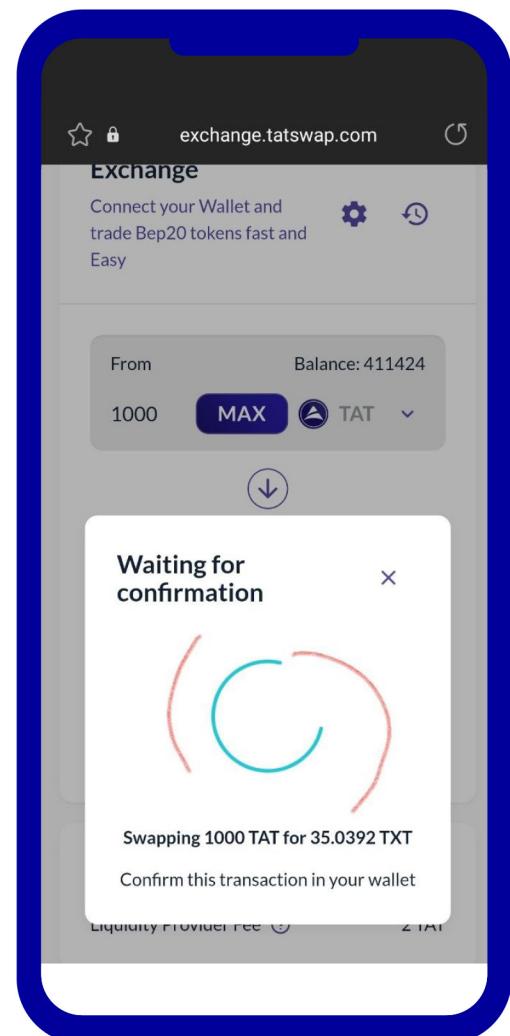

Click on the Unlock Wallet button. It will change to a Swap button (see image below).

Note: 90% of the time it will show you Swap instead of Unlock Wallet.

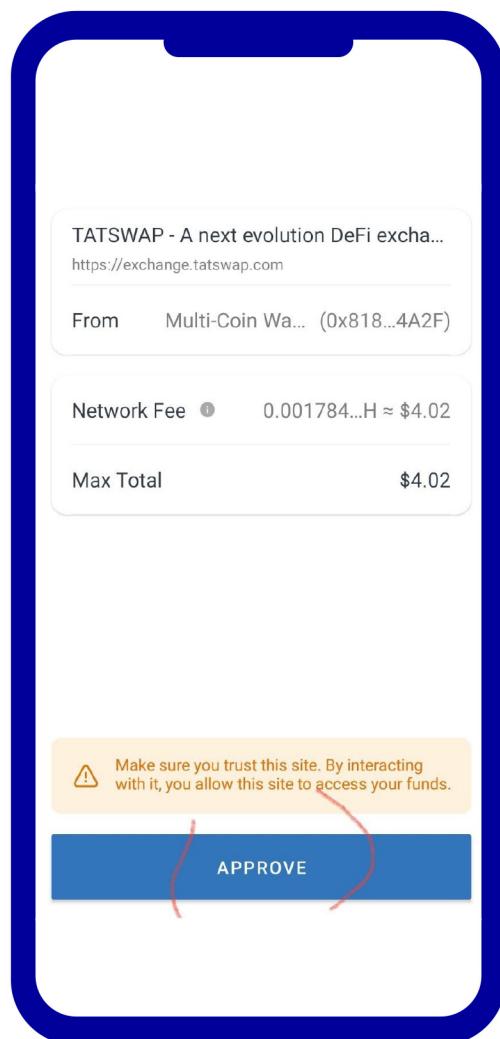

Next, Click on the Swap button and Your TATCOIN will be taken and you will be given TXT. You will see the image shown below and you have to wait until the Confirmation is done.

Afterwards, it will take you to the next image below and ask you to approve.

Click to approve.

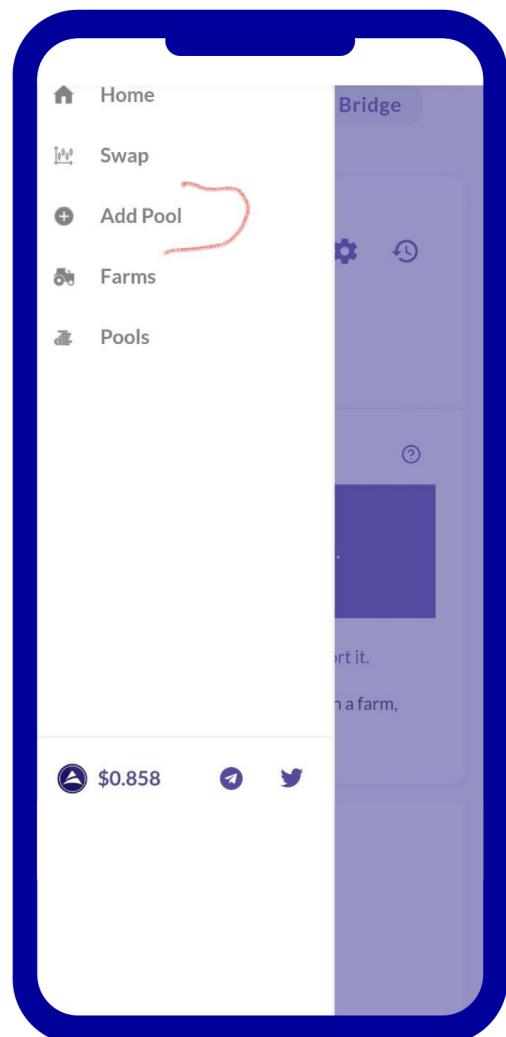

You have now successfully swapped your TATCOIN to TXT with ease.

# How to add Liquidity to the pool

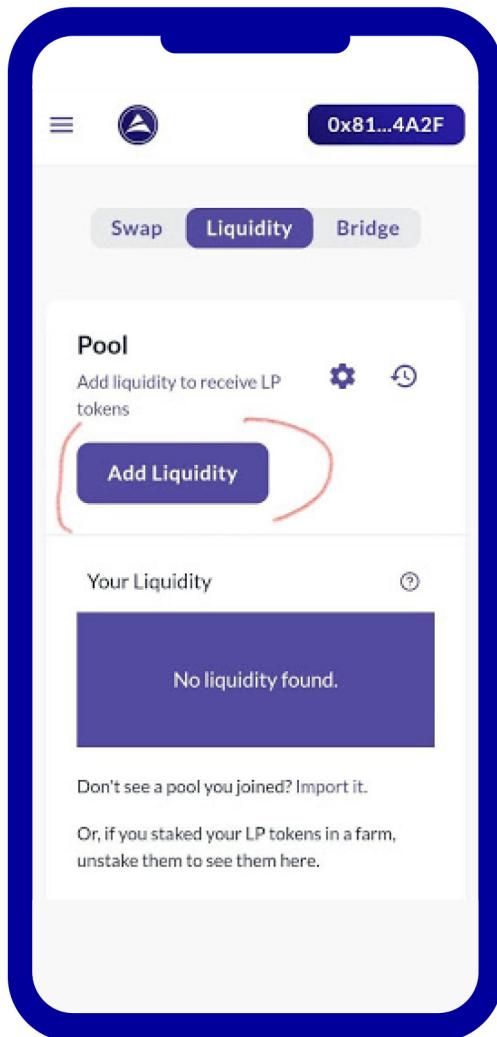

This is the most profitable feature here.

Before you proceed, make sure you already have the same Value of TATCOIN and BNB you will be needing on your TRUST wallet.

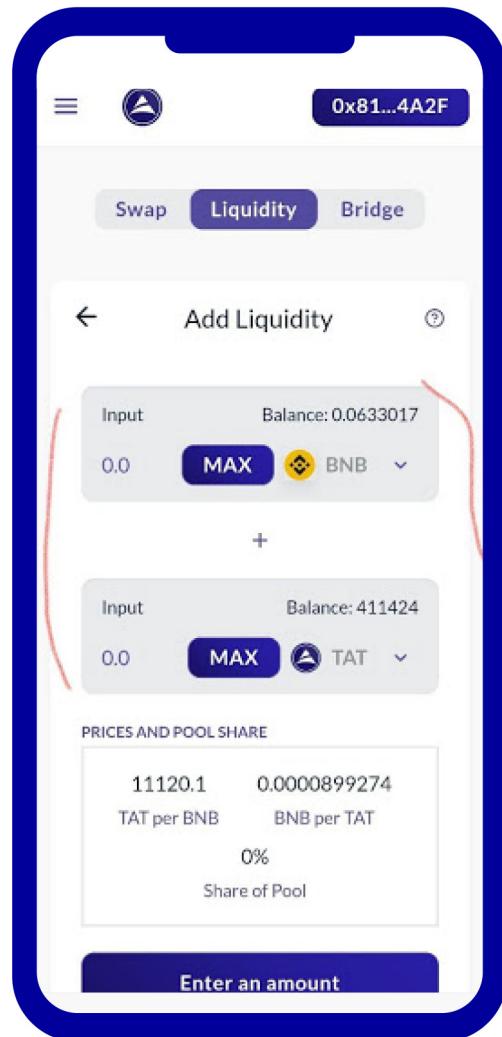

Then go to the menu bar at the top left corner again, and click on the option labeled **add pool**.

Next, Click on **add liquidity** as shown below:

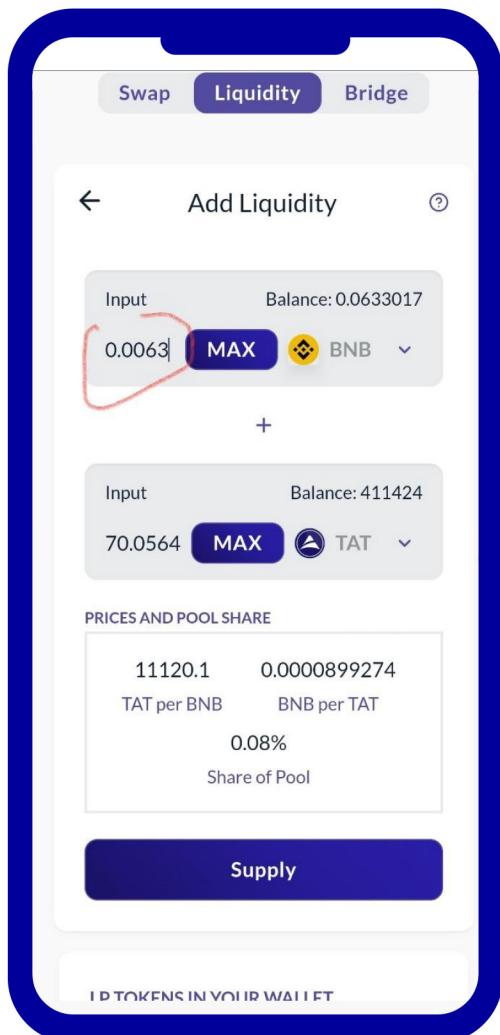

When you do, it will open to the image below:

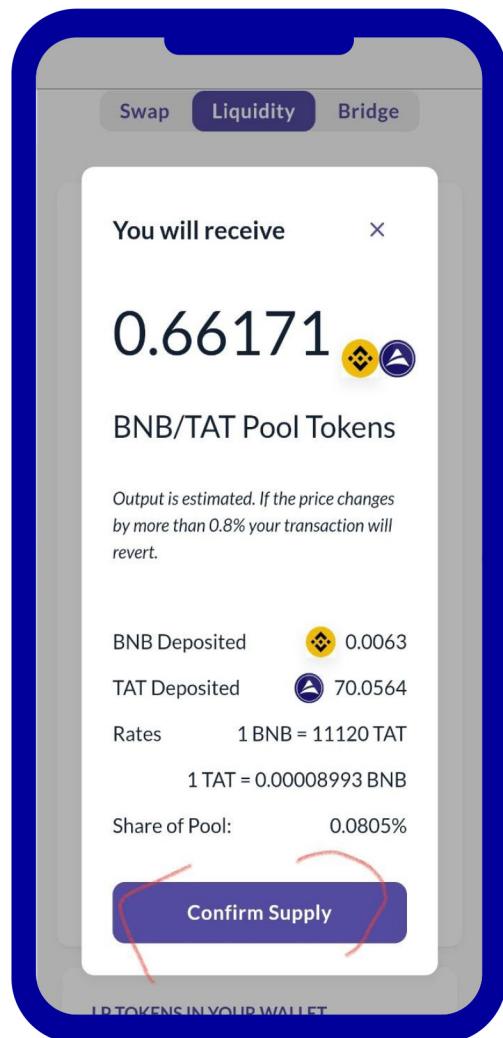

As we explained earlier, choose BNB up and TAT down.

Next, type the amount of BNB you want to farm up and it will automatically show you the Amount Of TATCOIN you will need down. As seen here in the image below:

Next Click supply, it will show the image below.

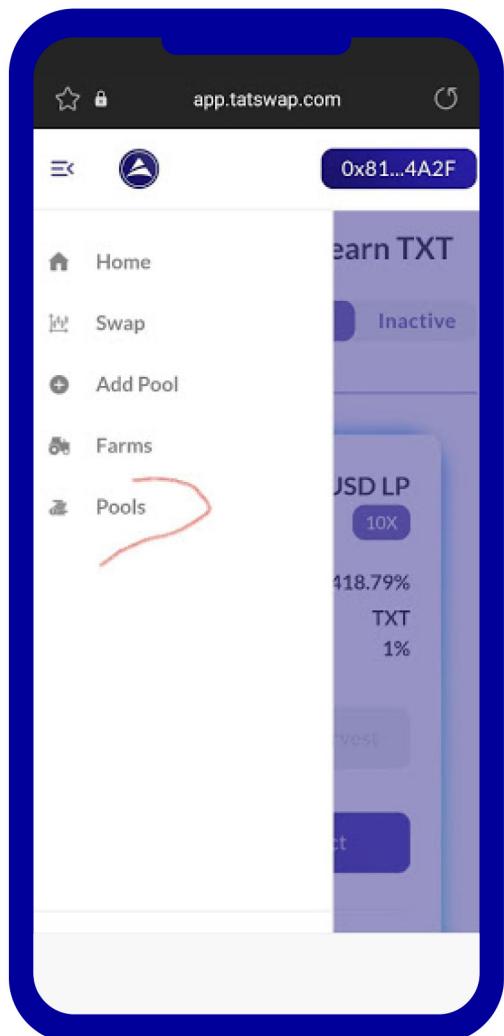

It will Ask you to confirm. Click it until it approves.

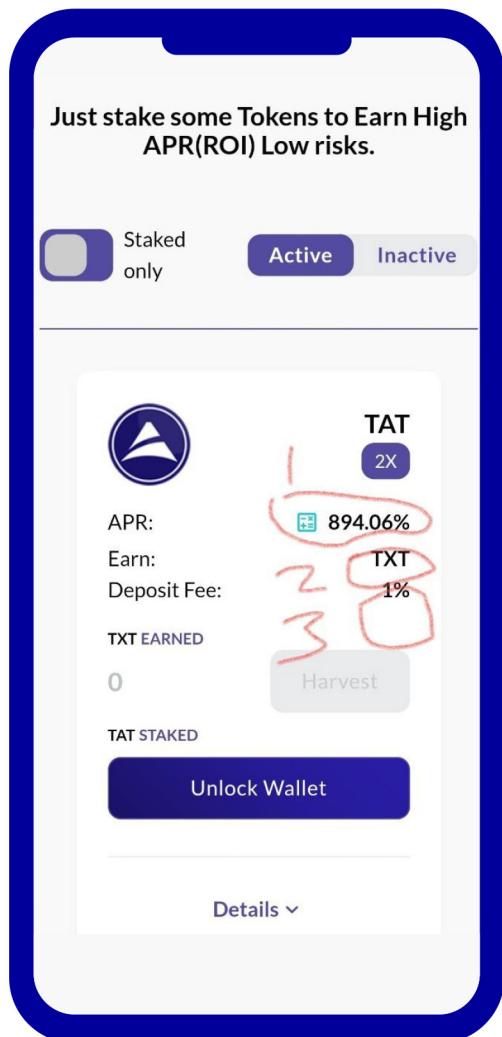

# Staking

If all you want to do is Stake TATCOIN then click Pool as shown below:

Pool here represents the Normal Staking you know and do on ABiT Network apps. This staking is for 12 months.

Once you click there you will see the image below:

### Circle Number 1 - The APR

The APR has the same meaning as ROI. APR stands for \*Annual Percentage Rate (RETURNS ON INVESTMENT). Both mean the same thing. So in this case the APR(ROI) is 894% In 12 Months and it's paid Daily.

### Circle No 2 - The Reward

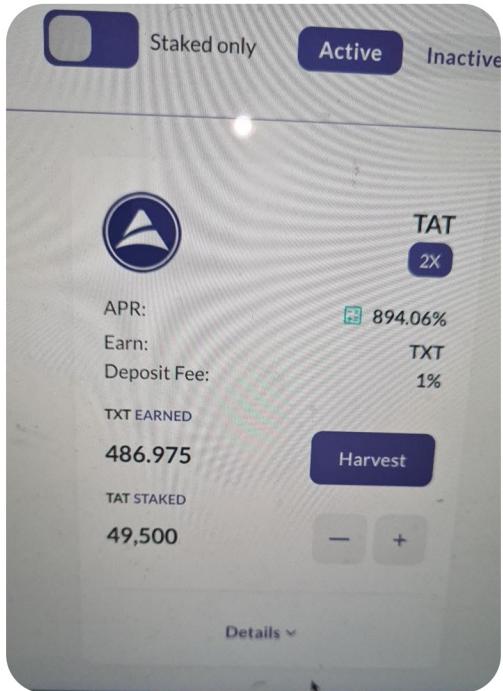

You will earn your APR in the Reward TOKEN TXT.

You will earn 894% of any amount you stake. This 894% is divided and paid daily. What this means is that they will be paying you daily.

### Circle No 3 - Fee

The number 3 is the Fee you will pay. Other platforms charge 2% and more but for now we charge only 1% we will increase it soon.

The difference between this staking and the one we do on ABiT Network is that you can unstake any day you like and Take all the profit you've Made out with your Capital.

You can see how much you've earned each time you click Pools (as in the image above) and you can Harvest only Your profit and leave the capital staked.

Remember any day you unstake you will only get your Profit and your capital at the exact time.

It has nothing to do with future earnings.

## Take NOTE:

Now there is something important you must know.

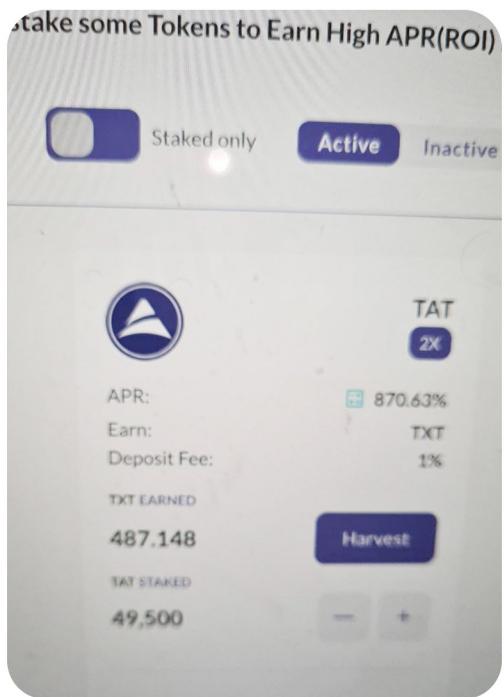

Decentralized exchanges staking gives you APR(ROI) in the value of Token you stake and not Number of Tokens like we do on ABiT Network.

On ABiT Network if you stake 1,000 TATCOIN for 12 months you get 200 Extra TATCOIN irrespective of the price.

ABiT Network pays in Number of Coin

1,000 TATCOIN no matter it worths now will give you 200 Extra TATCOIN at the end of Stake

On Decentralized exchanges if you stake 100\$ Worth of TATCOIN you will get your APR(ROI) in the value you stake.

Looking at the image above, what it means is that if you stake 100\$ worth of TATCOIN you will get 870% worth of 100\$ and you get this in daily divisions.

Remember the APR(ROI) changes per seconds

It was 19,000% when we launched  
It's down to 870% at the time of writing this.  
And tomorrow it may be 100% or 1 million percent. Nobody controls it. That is why it is Decentralized.

You can always opt out when you like since your profit comes daily.

**That's all about how to trade on Decentralized Exchanges.**
